

Cyclops Green Commitment

Actions speak louder than words

It is our collective responsibility to minimise and wherever possible remedy the environmental damage inflicted upon our planet. This is a responsibility that our business holds respectfully, with careful consideration and pro activity.

As well as making bold changes we are ensuring that we take more environmentally friendly steps each and every day.

Maximising world resources

Fundamentally, the business model that we work to maximises the utilisation of resources by ensuring we put surplus production stock and excess inventory into the hands of businesses who need them. While OEMs and CEMs might want to throw away excess and obsolete components, Cyclops Excess keeps it in the supply chain. With this action alone we are reducing environmental pollution and minimising landfill.

Every kilometre matters

Within our warehousing and despatch, we work hard to consolidate shipments wherever possible to reduce transportation emissions. A Group business, GSS manages its clients' logistics and delivery, sending merged units from a single hub. This saves on delivery costs for the customer, and crucially all of the associated emissions connected with it.

Coupled with the work of our chosen delivery partner who now operate over 1500 EV vehicles.

Proud partners

We are extremely proud to work with many companies throughout the green energy sector, providing the electronic components necessary to keep wind turbines turning, solar panels generating and charge networks charging

Electric Company Cars and on site EV-Charging

All company cars provided to our management team are all electric, which are a long-term investment for Cyclops. Additionally, we provide electric car charging points at our office for staff.

Setting the expectation

There is emphasis within the office, too, on sustainable practices. We take recycling and waste seriously, and ensure all staff are aware of the energy-related policies in place. We have also introduced a working-from-home initiative to decrease the carbon footprint of our staff.

Energy efficient offices

Our Hull-based team recently relocated to a renewable technology hub, only available to environmentally conscious companies. Our business's green credentials were verified before we could move our office, which shows our dedicated effort to being green.
